Manual Event Management Doesn't Scale

Event teams spend hours on repetitive tasks that break at scale. Icons below summarize common failures and their impact.

Registration

Duplicate entries and mismatched fields

Attendance

Manual errors, long queues, paper logs

Reminders

Missed or mistimed notifications

Certificates

Delayed generation and delivery

Feedback

Collected but never converted to insights

Operational Risk

Data inconsistencies and reporting gaps

Project Goals

- Automate participant registration and duplicate prevention
- Generate QR codes automatically for contactless check-in
- Enable webhook-driven attendance validation
- Send scheduled reminders with rate limiting
- Auto-generate and deliver PDF certificates (PDFMonkey)
- Analyze feedback with OpenAI for sentiment & themes
- Produce organizer reports automatically
- Maintain a single, central Google Sheets event database

Overall Solution Architecture

Five independent n8n workflows coordinate through a shared Google Sheets database, which acts as the single source of truth. Integrations handle input, processing, storage, and delivery.

Workflow 1 — Registration & Participant Management

Sequence

1. Registration Form
2. Normalize Data
3. Duplicate Check
4. Save to Google Sheets
5. Generate QR Code
6. Upload QR to Drive
7. Send Confirmation Email

Highlights: duplicate prevention, automatic QR generation, instant confirmation emails

Workflow 2 — QR Attendance System

Sequence

1. QR Scan → Webhook
2. Participant Lookup in Google Sheets
3. Attendance Validation
4. Duplicate Check-in Prevention
5. Timestamp Attendance → Save
6. Respond to Scanner → Success/Failure
7. Audit Invalid Scans → Log for review

Highlights: webhook-driven automation, duplicate prevention, audit logging for compliance

Workflow 3 — Reminder Automation

Sequence

1. Hourly Scheduler Trigger
2. Read Upcoming Sessions from Sheets
3. Filter Eligible Participants
4. Loop → Prepare Personalized Email
5. Send Reminder (with rate limiting)
6. Mark Reminder Sent in Sheets

Highlights: scheduled execution, duplicate reminder prevention, built-in rate limiting to respect limits

Workflow 4 — Certificate Generation

Sequence

1. Event Completion Trigger
2. Filter Eligible Participants
3. Generate PDF via PDFMonkey (templated)
4. Upload Certificate to Google Drive
5. Email Certificate to Participant
6. Mark Certificate Sent in Sheets

Notes: PDFMonkey templates enable branded certificates and batch generation for scale.

Workflow 5 — AI Feedback & Analytics

Feedback Processing

New feedback → OpenAI for sentiment & theme extraction
→ Save structured results to Sheets

- ❏ Automates tag creation, sentiment scoring, and stores themes for reporting

Screenshot Placeholder: Insert feedback-processing workflow screenshot here.

Weekly Analytics

Weekly schedule → Merge registration, attendance, and feedback → Generate AI report via OpenAI → Email organizers

- ❏ Highlights: automated reporting, contextual insights, organizer-ready summary

Screenshot Placeholder: Insert weekly-analytics workflow screenshot here.

Technologies & Ecosystem

Multiple cloud services are orchestrated using n8n to automate the complete event lifecycle.

n8n
Workflow orchestration engine

Google Sheets
Single source of truth database

Gmail
Email delivery and notifications

Google Drive
Certificate & asset storage

OpenAI
Feedback sentiment and
theme extraction

PDFMonkey
Templated PDF certificate
generation

QR Code API
On-demand QR generation for
tickets

Webhooks
Real-time scanner and external
integration triggers

Project Outcome

- Fully automated participant lifecycle
- Contactless attendance
- Automatic reminder system
- Automated certificate generation
- AI-powered feedback analysis
- Centralized event records
- Reduced manual effort
- Reliable audit trail
